11/1/16 - If you're going to @seagl next week, be sure to catch @allisonrandal's awesome keynote and my crappy one.

11/1/16 - I agree only if there's a second image in which he falls off and shatters a femur. <https://t.co/g1JjstdB3V>

11/2/16 - A darkness falls over San Francisco. The crowd quiets. Something is deeply wrong-- @petecheslock has arrived.

11/2/16 - @NewsBlur You totally need to talk to @honeycombio.

11/2/16 - I'm waiting for @honeycombio to release a management facing dashboard. Can it be called honeycombover?

11/2/16 - @slackhq I have fifteen teams. Do I really have to disable notification sounds 15 different times?!

11/2/16 - @jeremy_carroll What's the best way to reach you privately these days?

Starting in OS X v10.12, you can no longer provide external code or data alongside your code-signed app in a zip archive or unsigned disk image. An app distributed outside the Mac App Store runs from a randomized path when it is launched and so cannot access such external resources.

11/3/16 - This certainly explains why my `ps` output confused and frightened me:

11/3/16 - Off by one errors suck.

11/5/16 - @jrozner See the larger tweetstorm and shake your head sadly at my choices.

11/8/16 - @darth Cujo and Ethel are more concerned with local ballot issues today.

11/7/16 - It's buzzword compliant; Thought Leaders are proud It's microservices driven, it only runs in the cloud
